

Vertical Transportation

SYSKA HENNESSY
GROUP

Below Department of Veterans Affairs, Palo Alto, CA

*One of the most trusted and experienced
specialty consultants in the field
offering you the knowledge, perspective and precision
to deliver more intelligent transportation systems*

Syska Hennessy Group

Ensuring that vertical transportation is
a seamless component of your project success

A step ahead in knowledge, quality and service

It's not often that a firm of broad scope and capabilities also cultivates leadership in a specialized practice. Syska Hennessy Group brings that distinction to its vertical transportation services.

For more than 50 years, clients have relied on Syska Hennessy to plan, design, engineer and build reliable, cost-effective systems. We, in turn, have aimed to exceed the industry standard for knowledge, technical quality and client service. Each vertical transportation project is performed with the hands-on direction of one of our core team of principals. This guidance speeds project completion, introduces new design solutions and simplifies decisions about vertical transportation as a seamless component of your project success.

All members of our Vertical Transportation Group are versed in local and national codes, allowing us to more rapidly serve diverse locales and projects. Our principals are QEI certified and knowledgeable of code issues affecting your building, a major factor in reducing change-order impact.

Experience to serve the full life cycle of your system

Syska Hennessy plans, designs and constructs transportation systems including elevators, escalators, moving walks, specialized lifts and material handling systems in virtually any application and location around the globe. Our experience spans healthcare facilities, hotels/resort, mixed-use projects, offices, retail centers, and educational facilities, as well as more complex building types such as airports, convention centers and sports arenas, performing arts theaters, correctional facilities and historical restorations.

This experience gives us the insight to help you across the full life cycle of a facility with design, diagnostics and modernization. Our goal is to provide you with a high-quality system that extends the economic life of your investment. New systems are designed for real-life operating loads, adaptable to changing building populations and easily upgradable. For existing facilities, we perform equipment audits to outline and implement necessary upgrades. Our knowledge of manufacturers' systems ensures that you get exactly what you need, when you need it and within your budget.

Producing answers, solving problems and earning complete confidence

Clients value our participation not only for the work we do, but how well we do it.

With integrated services in consulting, engineering, technology and construction, our solutions leverage the proven-best practices from all of our disciplines. As a design specialist or team leader, we instill flexibility, creativity and cooperation into the process. We relay technical complexity into no-nonsense information and clear recommendations. Your vertical transportation needs are handled completely so you can redirect your resources where they are needed most.

Everything you need to succeed

As part of the Syska Hennessy Group, we are able to perform in a range of ways – consulting directly with facility owners on modernization, working with architects in developing new projects or providing turnkey construction. Our long-term client relationships are strengthened by the equal attention we pay to your needs, large and small.

We appraise our work only on the basis of your success. In that, we take a partner's interest, investing our expertise and energy to deliver everything you need.
